Circumcision & Vasectomies

- Postoperative Care Instructions -

On the Day of the Procedure

Please rest and keep the dressing in place.

If you experience significant bleeding, apply firm pressure to the bleeding site and contact us immediately. Alternatively, you may go to a nearby hospital with a surgical department.

Starting from the Second Postoperative Day

Remove the dressing entirely and disinfect the wound using a suitable skin antiseptic. Then, apply a thin layer of the cream provided to you twice a day and cover the area with sterile compresses.

Continue this procedure for the next seven to ten days.

Additional Information

The sutures are self-absorbable and do not need to be removed.

If you notice signs of infection during the healing process (increased redness, swelling, pain), please return to us for an evaluation as soon as possible.
